Overview

This course will provide evaluation and critique of current and future standards of care in the treatment of the cardiovascular patient with respect to medical management and best practice guidelines for the primary care provider. It continues to focus on the new developments in cardiovascular imaging, appropriateness, and strategies to reduce patient readmission.

Each session will include a panel discussion and case studies.

Objectives

- Understand diabetes management, medications and treatment guidelines, and its relation to cardiac disease.
- Understand the treatment of aortic valvular disease and the role of TAVR.
- Understand the treatment and implications of Atrial Fibrillation.
- Understand the appropriate use of invasive coronary procedures related to STEMI and management of CAD.
- Understand the impact of smoking and smoking cessation programs available to most primary care practitioners.
- Understand the treatment and guidelines associated with the evaluation of venous insufficiency.
- Educate on novel programs designed for treatment of CHF.
- Educate on health care ethics.

Who Should Attend

This course is designed for the primary care providers, cardiologists, advanced practice providers, registered nurses, and other interested health care professionals.
