Continuing Education Information

In support of improving patient care, this activity has been planned and implemented by the University of Pittsburgh and The Jewish Healthcare Foundation. The University of Pittsburgh is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME) and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team. **1.25 hours is approved for this course.**

As a Jointly Accredited Organization, University of Pittsburgh is approved to offer social work continuing education by the Association of Social Work Boards (ASWB) Approved Continuing Education (ACE) program. Organizations, not individual courses, are approved under this program. State and provincial regulatory boards have the final authority to determine whether an individual course may be accepted for continuing education credit. University of Pittsburgh maintains responsibility for this course. Social workers completing this course receive **1.25 continuing education credits.**

Disclosures

No members of the planning committee, speakers, presenters, authors, content reviewers, and/or anyone else in a position to control the content of this education activity have relevant financial relationships with any entity producing, marketing, re-selling, or distributing health care goods or services, used on, or consumed by, patients to disclose.

Mutual Agreement

- Everyone on every Program Evaluation and Research Unit (PERU) webinar is **valued**. Everyone has an expectation of **mutual, positive regard** for everyone else that respects the **diversity** of everyone on the webinar.
- We operate from a **strength-based, empathetic, and supportive** framework – with the people we serve, and with each other on PERU webinars.
- We encourage the use of **affirming language** that is not discriminatory or stigmatizing.
- We treat others as **they** would like to be treated and, therefore, avoid argumentative, disruptive, and/or aggressive language.

University of
Pittsburgh

School of
Pharmacy

PERU

Mutual Agreement (continued)

- We strive to **listen** to each person, avoid interrupting others, and seek to **understand** each other through the Learning Network as we work toward the highest quality services for Centers of Excellence (COE) clients.
- Information presented in Learning Network sessions has been vetted. We recognize that people have different opinions, and those **diverse perspectives** are welcomed and valued. Questions and comments should be framed as **constructive feedback**.
- The Learning Network format is **not conducive to debate**. If something happens that concerns you, **please send a chat during the session** to the panelists and we will attempt to make room to address it either during the session or by scheduling time outside of the session to process and understand it. **Alternatively, you can reach out offline to your PERU point of contact.**

Learning Objectives

By the end of this training, you will be able to do the following:

- Explain the benefits of rapid needs assessment on client engagement
- Describe the components of a Rapid Assessment of Needs, including which needs to assess rapidly.
- Explore strategies for using assessment data to enhance care coordination and improve client outcomes.

PER_XU

Why Do a Rapid Assessment of Needs?

"The Centers of Excellence will ensure care coordination, increase access to Medication-Assisted Treatment and integrate physical and behavioral health for individuals with Opioid Use Disorder."

Complex needs

Addresses **needs** that integrate primary and behavioral health

Expands access to **MOUD**

targets **high-risk** individuals

University of
Pittsburgh

School of
Pharmacy

PER_XU

Hub and Spoke Model

Spoke provides **tailored** care resources

Addresses full spectrum of **needs** and **integrates** primary and behavioral health

Minimizes **treatment gaps**, expands access to **MOUD**, targets **high-risk** individuals

Tailored Solutions

Pharmacy

PER_XU

Rapid

- The term "rapid" in this context refers to the speed and efficiency with which we assess and address client needs, especially during the **critical early stages** of COE engagement.
- **Less than 120 minutes**
- prioritized, focused, and timely to ensure **immediate** barriers are identified and addressed

University of
Pittsburgh

School of
Pharmacy

PER_XU

Assessment

- Identify needs systematically to **pinpoint** critical areas.
- Assessment involves gathering information from multiple sources and methods to gain an understanding of the client's **needs, barriers, and strengths**.
- With the rapid assessment, the focus is on identifying and addressing **immediate needs first**.

University of
Pittsburgh

School of
Pharmacy

Immediate Needs

University of
Pittsburgh

School of
Pharmacy

PER_XU

Immediate Needs: Risk of Overdose

- Early identification of overdose risk allows for the implementation of life-saving interventions, ensuring clients remain engaged in care and have the **ability to live and live safely.** ^{1,8}
- Gathering client-level information that may indicate overdose risk, such as:
 - History of **overdose and recency** ^{2,3}
 - Details about the **substance(s)** and **methods** an individual uses or has used ³
 - History of **mental health** conditions ^{4,5}
 - **Treatment history** ⁴
 - **Criminal justice** involvement. ^{6,7}
 - The provision of **Narcan or Naloxone** ⁸

Immediate Needs: **Transportation**

Vouchers/Passes/Tokens²

Shuttle Services²

Medical Assistance Transportation
Program (MATP)

Mobile Engagement

Immediate Needs: **Mental Health and Psychiatric**

- Co-occurring mental health conditions are **prevalent** among clients with OUD. ¹
- Mental health conditions can **impact** energy levels and executive functioning. ^{2,3}
- Co-occurring **psychiatric support** has been shown to **improve** engagement and retention in treatment. ⁴
- Early identification of **suicide risk** allows for the implementation of targeted interventions to address death by suicide and to safety plan ^{5,6}

(¹Vekaria et al., 2021; ²Brown et al., 2011; ³Substance Abuse and Mental Health Services Administration, 2013; ⁴Wakeman et al., 2022; ⁵ Nestadt & Bohnert, 2020; ⁶Bogdanowicz et al., 2016)

Immediate Needs: **Support**

Clients with limited social support experience higher levels of psychological distress and are more likely to discontinue care.^{1,2}

Studies have also found that social support is associated with MOUD retention.^{3,4,5}

E.g., peer support or family involvement

Immediate Needs: **Housing**

- Housing instability has been identified as a primary structural **barrier** to treatment ^{1,2,3}
- Housing is important to consider **early in treatment**, as research shows that unstable housing is one of the strongest risk factors for discontinuation of MOUD within the first six months^{2,3}

University of
Pittsburgh

School of
Pharmacy

PER_XU

Immediate Needs: **Phone Access**

Regular access to phone communications¹

Also consider cellular service¹

Discussion Question

- What are the most common immediate needs **you address** during COE enrollment?

Research Evidence

Benefits of Rapid Assessment of Needs

- Essential for **effective** care management and **retention** during the initial stages of care^{1,2}
- **Removes** barriers
- Active coordinated effort to address biopsychosocial needs **within first 30 days** of care has been shown to
 - Reduce readmission rates³
 - Improve medication adherence³
 - and increase engagement in outpatient services³

University of
Pittsburgh

School of
Pharmacy

PER_XU

Benefits of Rapid Assessment of Needs

- Communicates the **value** of the COE
- Shows clients that **their well-being** and **safety** is a priority¹ from the very beginning.

(¹Bradywood et al., 2021)

Best Practices: Empathy and Perspective-Taking

Best Practices

- **Motivational Interviewing:** This approach helps uncover clients' immediate priorities/readiness for change and **empowers** them to identify their own needs and solutions^{1,2}
- **Trauma-Informed:** creates a **safe** environment for clients during the assessment process³
- **Client-Centered/Individualized:** Tailoring assessments to the **unique** circumstances of each client ⁴
- **Culturally-Sensitive:** Considering cultural **values** and experiences during assessments⁵
- **Solution-Focused:** Encouraging clients to identify past successes and envision goals during the initial assessment fosters a **sense of hope** and empowerment⁶

University of
Pittsburgh

School of
Pharmacy

PERxU

Discussion Question

Share a story of a time you used an **evidenced-informed strategy** to connect with a client to help get to their needs.

Pharmacy

PERxU

Conversational and Human-Centered

Intake is not just a checklist; Penn's Rock involved their CRSs in the creation of their intake form

Evidenced-based and Internal training for rapid assessment

Connection to the people and the tools

Provide comfort and engagement

Rapid: Penns Rock's intake is about 45 minutes

University of
Pittsburgh

School of
Pharmacy

PERxU

Summary

Key Takeaway Points:

- **COE Fidelity Guidelines:** The COE Fidelity Guidelines outline the need to complete a rapid assessment of needs, including a review of the client's immediate SDOH/HRSN needs.
- A **rapid** assessment of needs is important as the COE model is designed to engage **individuals at high risk** related to OUD
- COEs aim to **reduce these risks** and **improve** health outcomes.
- **Evidence-based approaches** provide a strong foundation for effective initial assessments and ongoing engagement with clients.
